▲ Minify JavaScript 0.9 s ヘ

about:blank 1/23

Minifying JavaScript files can reduce payload sizes and script parse time. Learn more. FCP [LCP]

If your build system minifies JS files automatically, ensure that you are deploying the production build of your application. You can check this with the React developer tools extension. <u>Learn more</u>.

DIAGNOSTICS

The `unload` event does not fire reliably and listening for it can prevent browser optimisations like the back-forward cache. Use `pagehide` or `visibilitychange` events instead. <u>Learn more</u>

Reduce unused JavaScript

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. <u>Learn more</u>. [LCP]

If you are not server-side rendering, <u>split your JavaScript bundles</u> with `React.lazy()`. Otherwise, code-split using a third-party library such as <u>loadable-components</u>.

Efficiently encode images Optimised images load faster and consume less mobile data. Learn more. Enable text compression Text-based resources should be served with compression (gzip, deflate or brotli) to minimise total network bytes. Learn more. FCP LCP Pre-connect to required origins Consider adding 'preconnect' or 'dns-prefetch' resource hints to establish early connections to important third-party origins. Learn more. FCP LCP Initial server response time was short — Root document took 10 ms Keep the server response time for the main document short because all other requests depend on it. Learn more. [FCP] [LCP] If you are server-side rendering any React components, consider using `renderToNodeStream()` or `renderToStaticNodeStream()` to allow the client to receive and hydrate different parts of the markup instead of all at once. Learn more. URL Time Spent http://localhost:1234 10 ms Avoid multiple page redirects Redirects introduce additional delays before the page can be loaded. Learn more. FCP [LCP] If you are using React Router, minimise usage of the `<Redirect>` component for route navigations. Pre-load key requests Consider using `<|ink rel=preload>` to prioritise fetching resources that are currently requested later in page load. Learn more. [FCP] [LCP] Use HTTP/2

HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. Learn more.

Use video formats for animated content

Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more [LCP]

Remove duplicate modules in JavaScript bundles

Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. [TBT]

Avoid serving legacy JavaScript to modern browsers - Potential savings of 0 KiB

Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature detection to reduce the amount of code delivered to modern browsers, while retaining support for legacy browsers.

Avoids an excessive DOM size - 49 elements

A large DOM will increase memory usage, cause longer <u>style calculations</u> and produce costly <u>layout reflows</u>. <u>Learn more</u>. (TBT)

Consider using a 'windowing' library, like `react-window`, to minimise the number of DOM nodes created if you are rendering many repeated elements on the page. <u>Learn more</u>. Also, minimise unnecessary re-renders using <u>`shouldComponentUpdate`</u>, <u>`PureComponent`</u> or <u>`React.memo`</u> and <u>skip effects</u> only until certain dependencies have changed if you are using the `Effect` hook to improve runtime performance.
