OPPORTUNITIES

Opportunity **Estimated Savings**

Serve images in next-gen formats

0.34 s ^

Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. Learn more.

about:blank 1/11

023, 12.30		about.brank		
		URL	Resource size	Potential savings
	div.js s69.j ss67	small/pezza.jpg (storage.googleapis.com)	62.3 KiB	28.7 KiB
	div.js s69.j ss67	small/fesh.jpg (storage.googleapis.com)	47.4 KiB	22.8 KiB
	div.js s69.j ss67	small/soop.jpg (storage.googleapis.com)	39.8 KiB	19.7 KiB
	div.js s69.j ss67	small/brrto.jpg (storage.googleapis.com)	31.8 KiB	16.1 KiB

Reduce unused JavaScript

0.3 s ^

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. <u>Learn more</u>. (LCP)

If you are not server-side rendering, <u>split your JavaScript bundles</u> with `React.lazy()`. Otherwise, code-split using a third-party library such as <u>loadable-components</u>.

URL	Transfer size	Potential savings
/bundle.js (localhost)	67.4 KiB	20.3 KiB

These suggestions can help your page load faster. They don't <u>directly affect</u> the performance score.

DIAGNOSTICS

▲ Serve static assets with an efficient cache policy — 4 resources found

A long cache lifetime can speed up repeat visits to your page. Learn more.

URL	Cache TTL	Transfer size
small/pezza.jpg (storage.googleapis.com)	1 h	63 KiB
small/fesh.jpg (storage.googleapis.com)	1 h	48 KiB
small/soop.jpg (storage.googleapis.com)	1 h	40 KiB
small/brrto.jpg (storage.googleapis.com)	1 h	32 KiB

Avoid chaining critical requests — 1 chain found

The critical request chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources or deferring the download of unnecessary resources to improve page load. Learn more. (FCP) (LCP)

Maximum critical path latency: 30 ms

Initial Navigation

http://localhost:1234

/bundle.js (localhost) - 10 ms, 67.41 KiB

○ Keep request counts low and transfer sizes small — 6 requests • 251 KiB

To set budgets for the quantity and size of page resources, add a budget.json file. Learn more.

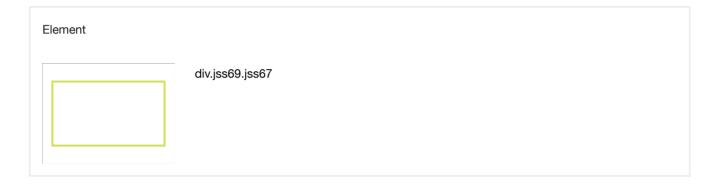

Resource type	Requests	Transfer size
Total	6	250.7 KiB
Image	4	182.6 KiB
Script	1	67.4 KiB
Document	1	0.7 KiB
Stylesheet	0	0.0 KiB
Media	0	0.0 KiB
Font	0	0.0 KiB

about:blank 3/11

Resource type	Requests	Transfer size
Other	0	0.0 KiB
Third-party	4	182.6 KiB

0	Largest contentful p	aint element	_	1	element for	oun	C
---	----------------------	--------------	---	---	-------------	-----	---

This is the largest contentful element painted within the viewport. Learn more [LCP]

O Avoid long main-thread tasks — 2 long tasks found

Lists the longest tasks on the main thread –useful for identifying worst contributors to input delay. Learn more (TBT)

URL	Start Time	Duration
/bundle.js (localhost)	1,503 ms	99 ms
http://localhost:1234	602 ms	50 ms

More information about the performance of your application. These numbers don't <u>directly affect</u> the performance score.

PASSED AUDITS (33)

Eliminate render-blocking resources

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. Learn more. FCP LCP

Properly size images

Serve images that are appropriately-sized to save mobile data and improve load time. Learn more.

Defer off-screen images Consider lazy loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. Learn more. Minify CSS Minifying CSS files can reduce network payload sizes. Learn more. FCP [LCP] If your build system minifies CSS files automatically, ensure that you are deploying the production build of your application. You can check this with the React developer tools extension. Learn more. Minify JavaScript Minifying JavaScript files can reduce payload sizes and script parse time. Learn more. FCP [LCP] If your build system minifies JS files automatically, ensure that you are deploying the production build of your application. You can check this with the React developer tools extension. Learn more. Reduce unused CSS Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. Learn more. FCP [LCP] Efficiently encode images Optimised images load faster and consume less mobile data. Learn more. Enable text compression Text-based resources should be served with compression (gzip, deflate or brotli) to minimise total network bytes. Learn more. FCP [LCP] Pre-connect to required origins Consider adding 'preconnect' or 'dns-prefetch' resource hints to establish early connections to important third-party origins. Learn more. FCP LCP Initial server response time was short — Root document took 0 ms Keep the server response time for the main document short because all other requests depend on it. Learn more. [FCP] [LCP] If you are server-side rendering any React components, consider using `renderToNodeStream()` or `renderToStaticNodeStream()` to allow the client to receive and hydrate different parts of the markup instead of all at once. Learn more.

about:blank 5/11

URL Time Spent http://localhost:1234 0 ms Avoid multiple page redirects Redirects introduce additional delays before the page can be loaded. Learn more. FCP [LCP] If you are using React Router, minimise usage of the `<Redirect>` component for route navigations. Pre-load key requests Consider using `<link rel=preload>` to prioritise fetching resources that are currently requested later in page load. Learn more. FCP LCP Use HTTP/2 HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. Learn more. Use video formats for animated content Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more [LCP] Remove duplicate modules in JavaScript bundles Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. TBT Avoid serving legacy JavaScript to modern browsers - Potential savings of 0 KiB Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature detection to reduce the amount of code delivered to modern browsers, while retaining support for legacy browsers. Learn more TBT **URL** Potential savings 0.1 KiB /bundle.js (localhost) bundle.js:12 @babel/plugin-transform-classes Preload largest contentful paint image

about:blank 6/11

Preload the image used by the LCP element in order to improve your LCP time. Learn more. [LCP]

	URL	Potential savings
div.jss 69.jss 67	small/fesh.jpg (storage.googleapis.com)	0 ms

Avoids enormous network payloads — Total size was 251 KiB

Large network payloads cost users real money and are highly correlated with long load times. Learn more. [LCP]

✓ Show 3rd-party resources (4)

URL	Transfer size
/bundle.js (localhost)	67.4 KiB
small/pezza.jpg (storage.googleapis.com)	62.5 KiB
small/fesh.jpg (storage.googleapis.com)	48.0 KiB
small/soop.jpg (storage.googleapis.com)	40.0 KiB
small/brrto.jpg (storage.googleapis.com)	32.0 KiB
http://localhost:1234	0.7 KiB

Avoids an excessive DOM size - 49 elements

A large DOM will increase memory usage, cause longer <u>style calculations</u> and produce costly <u>layout reflows</u>. <u>Learn more</u>. [TBT]

Consider using a 'windowing' library, like `react-window`, to minimise the number of DOM nodes created if you are rendering many repeated elements on the page. <u>Learn more</u>. Also, minimise unnecessary re-renders using <u>`shouldComponentUpdate`</u>, <u>`PureComponent`</u> or <u>`React.memo`</u> and <u>skip effects</u> only until certain dependencies have changed if you are using the `Effect` hook to improve runtime performance.

Statistic	Element		Value
Total DOM Elements			49
Maximum DOM Depth		span.jss75	9

User Timing marks and measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. <u>Learn more</u>.

Use the React DevTools Profiler, which makes use of the Profiler API, to measure the rendering performance of your components. <u>Learn more.</u>

JavaScript execution time - 0.1 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn more</u>. [TBT]

URL	Total CPU Time	Script Evaluation	Script Parse
http://localhost:1234	119 ms	43 ms	8 ms
/bundle.js (localhost)	99 ms	87 ms	12 ms

Minimises main-thread work -0.3 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn more (TBT)</u>

Category	Time Spent
Script Evaluation	139 ms
Other	84 ms
Style & Layout	34 ms

about:blank 8/11

Category	Time Spent
Script Parsing & Compilation	19 ms
Rendering	7 ms
Parse HTML & CSS	7 ms

All text remains visible during webfont loads

Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. Learn more. FCP [LCP]

Minimise third-party usage - Third-party code blocked the main thread for 0 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. <u>Learn more</u>. (TBT)

Third-party	Transfer size	Main-thread blocking time
Other Google APIs/SDKs	183 KiB	0 ms
small/pezza.jpg (storage.googleapis.com)	63 KiB	0 ms
small/fesh.jpg (storage.googleapis.com)	48 KiB	0 ms
small/soop.jpg (storage.googleapis.com)	40 KiB	0 ms
small/brrto.jpg (storage.googleapis.com)	32 KiB	0 ms

Lazy load third-party resources with facades

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. <u>Learn more</u>. <u>(TBT)</u>

Largest contentful paint image was not lazily loaded

Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. <u>Learn more</u>.

about:blank 9/11

div.jss69.jss67 Avoid large layout shifts These DOM elements contribute most to the CLS of the page. ©IS Uses passive listeners to improve scrolling performance Consider marking your touch and wheel event listeners as 'passive' to improve your page's scroll performance. Learn more. Avoids accusent.veite() For users on slow connections, external scripts dynamically injected via 'document.write()' can delay page load by tens of seconds. Learn more. Avoid non-composited animations Animations which are not composited can be poor, slow and increase CLS.
